DETAILED ACTION

Allowable Subject Matter

The indicated allowability of claim 12 is withdrawn. The allowability of claim 12 was in error since the claim was canceled in an amendment on 9/17/01 which, due to Office Error, was overlooked.

The indicated allowability of claim 10 is withdrawn in view of the newly discovered reference(s) to Silfvajt et al, US Patent 5,402,501. Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 3-7, 9 and 11 are rejected under 35 U.S.C. 102(e) as being anticipated by Silfvajt et al. Silfvajt discloses an audio mixer comprising a feature to record changes in settings of signal processing equipment and synchronize the recorded sequences to timecodes. Upon playback, the changes in fading are automatically accomplished. See column 15 lines 44-62. Thus there is a set of automation commands being generated based upon first and second

Art Unit: 2644

timecodes (at different times) and invoking automated signal processing functions to be applied to a signal source. Claims 1, 3-7, 9, and 11 are met.

Claims 13-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Schult et al, WO 91/15851. Schult discloses a method and apparatus for automation of signal processing functions of audio signals stored on a magnetically recorded medium comprising digitized timecodes for a plurality of audio channels entered in a computer, whereby equalization is effected on a channel by channel basis. Claims 13-15 are met.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Silfvait in view of East et al. Silfvajt does not disclose that each timecode signal is associated with a respective sound source signal. East et al disclose an audio mixer comprising a plurality of audio channels each having an associated timecode. Therefore, it would have been obvious to one of ordinary skill in the art at the time of invention to modify Silfvait, per the teachings of East et al, for the purpose of controlling an audio mixer for a multiplicity of audio signals.

Conclusion
